

## Press release

### **Digital all-round: the European research project iDev40 focuses on networking – from the idea and concept to the consumer**

Munich, Germany and Villach, Austria 14 June 2018 – The European research project iDev40 (Integrated Development 4.0) is launched today under the leadership of Infineon Austria. In this project, 38 partners from six countries will be involved in research on the smart networking of development and production processes for electronic components and systems. With a project volume of 47 million euros, iDev40 is among the biggest European research projects with a focus on digitization along the entire value chain and Industry 4.0.

Companies are facing the challenge of integrating all their processes in a globally networked, digital value chain. "Those who use the digitization in the right manner will make development, production and logistics faster, more flexible and more cost efficient," said Jochen Hanebeck, Chief Operations Officer of Infineon Technologies AG. "iDev40 aims at automating highly complex processes through methods of artificial intelligence and to train our employees for the new tasks of the future. Thus, we boost the innovative strength and global competitiveness of the European electronics industry".

"Only by joining our forces, Europe will be a leading innovation and business region with micro- and nano-electronics as key enabling technology for many other innovative industries", said Sabine Herlitschka, CEO of Infineon Technologies Austria AG. Herlitschka opts for cross-border cooperation in research: "Infineon Austria contributes its know-how to the project as one of the strongest companies in terms of research and pioneer in Industry 4.0 in Austria. Infineon also contributes its experience as the coordinator of large-scale European research projects".

### **Digital all-round: knowledge, development and production**

The European three-year research project focuses on three areas: secure data and knowledge management along the product life cycle, digital information flow and innovations in the supply chain. Intelligent data management provides secure access to information for people and systems. This makes it possible to deduce information and knowledge from huge amounts of data at high speeds. Development and production teams will be networked with each other,

independent of their locations, and communicate in real time along the value chain. Processes can be virtually mapped by digital factory and product twins and can thus be simulated comprehensively. Artificial intelligence and machine learning play a central role in all of this.

An important research aspect of iDev40 is the continued development of jobs of the future, in terms of both new job profiles and the skills that are needed to interact with highly automated, complex systems.

Through this project over 15,000 jobs will be secured in the companies involved over the medium to long term. Together with partners along the entire value chain of electronic components and systems this extends to securing work for 50,000 employees globally.

### **Project launch with top-level participants from the whole of Europe**

Top-level project partners attended the kick-off event of Infineon Austria in Villach. Funding agencies and politics were represented by **Max Lemke** (Head of Unit “Technologies and Systems for Digitising Industry”, European Commission, Directorate General CONNECT), **Bert De Colvenaer** (Executive Director ECSEL Joint Undertaking), **Michael Wiesmüller** (Head of Department of Information, Industrial Technologies and Space Travel of the Austrian Ministry for Transport, Innovation and Technology – BMVIT), and **Peter Kaiser** (Governor of Carinthia) represented.

iDev40 is organized as a private-public partnership and as such set to drive the global competitiveness of the European microelectronics industry. It combines investments from industry, individual countries and ECSEL (Electronic Components and Systems for European Leadership) Joint Undertaking. In addition to investments from industry, iDev40 is co-financed by funding from Austria (BMVIT), Belgium, Germany, Italy, Romania, Spain and the ECSEL Joint Undertaking.

### **38 project partners from six countries cooperate in iDev40**

**Austria:** Austrian Institute of Technology GmbH, AVL List GmbH, Infineon Technologies Austria AG, Infineon Technologies IT-Services GmbH, CISC Semiconductor GmbH, evolaris next level GmbH, KAI Kompetenzzentrum Automobil - und Industrieelektronik GmbH, Know Center GmbH, Kompetenzzentrum - Das Virtuelle Fahrzeug Forschungsgesellschaft mbH, TTTECH Computertechnik AG, Vienna University of Technology, Klagenfurt University

**Belgium:** Sirris, Yazzoom

**Germany:** camLine GmbH, eccenca GmbH, Elmos Semiconductor AG, FernUniversität Hagen, Fraunhofer Institute for Integrated Systems and Device Technology, Giesecke+Devrient Mobile Security GmbH, Dresden University of Applied Sciences, Zittau/Görlitz University, Infineon Technologies AG, Infineon Technologies Dresden GmbH, Ostbayerische Technische Hochschule Regensburg, SYSTEMA GmbH, Dresden University of Technology, University of Siegen, University of Applied Sciences Zwickau

**Italy:** Infineon Technologies Italia S.r.l., University of Milan-Bicocca

**Romania:** Infineon Technologies Romania & CO SCS, Technical University of Cluj-Napoca, University Politehnica of Bucharest

**Spain:** AKTING INGENIARITZA, SL, Fundacion Tecnalia Research & Innovation, JEMA ENERGY S.A., IBERMATICA

### **About Infineon Austria**

Infineon Technologies Austria AG is a group company of Infineon Technologies AG, a leading global supplier for semiconductor solutions that make life easier, safer and greener. Microelectronics from Infineon reduce the energy consumption of consumer electronics, domestic appliances and industrial systems. They make a major contribution to convenience, safety and sustainability of vehicles and make possible safe transactions in a networked world.

Infineon Austria is the only site besides Germany where the expertise in research & development, production and global business responsibility are pooled. The company headquarters is in Villach, Carinthia; other sites are located in Graz, Klagenfurt, Linz and Vienna. The company achieved a turnover of € 2.5 billion in the business year 2017 (as at 30 September) with a workforce of 3,785 people (1,547 of them in R&D) from some 60 nations. With its research expenditure of 428 million euros, Infineon Austria is one of the best industrial research performers in Austria.
